

# Physician Assistant (PA) Clinical Training Site Shortage

## Fast Facts

- **95%** of PA educational program directors are **moderately or very concerned** about the availability of adequate clinical training sites.<sup>1</sup>
- **52.3%** of PA education programs currently **pay for clinical training sites**, an increase from approximately **27.9%** in 2013.<sup>2</sup>
- Paying for clinical training sites is estimated to raise annual total expenses by an average of over **\$200,000 among paying programs.**<sup>2</sup>

## What's the Issue?

In PA education programs, practical experience in a clinical environment constitutes a significant portion of the student's training. During clinical rotations, students gain valuable insight into both the common and uncommon conditions encountered in the clinical setting, contributing significantly to the quality of care delivered to patients once the student enters practice. While the value of clinical experience during a student's education is apparent, PA education programs are experiencing increasing difficulty in securing access to clinical training sites for students. Due to recent trends which have increased demands upon practicing providers and facilitated health system consolidation, students have had to travel farther to sites to undertake clinical rotations while programs are increasingly compelled to pay for clinical training sites. These costs are ultimately borne by students through increased tuition rates.

## What's the Solution?

Policymakers can take immediate action to assist in mitigating the critical clinical training site shortage. Under Title VII of the Public Health Service Act, the Health Resources and Services Administration administers a number of programs designed to enhance clinical education capacity. The Primary Care Training and Enhancement program provides grants to PA programs to support primary care clinical rotations and the Area Health Education Centers program facilitates clinical education partnerships between health professions programs and community providers. Through increased investments in both of these programs, Congress can make clear progress in reducing clinical site shortages and expanding the PA workforce.
