# INTRODUCTION

---

## Physician Assistant Education Association

Founded in 1972, the Physician Assistant Education Association (PAEA) is the only national organization representing PA educational programs in the United States. At the time of the 2015 Prerequisite Curriculum Survey

administration, PAEA represented 194 member programs. For more information about PAEA and our products and services, visit [PAEAonline.org](http://PAEAonline.org).

# METHODS

---

## The Survey Instrument

The survey consisted of five sections:

- 1. General Information:** Information about program geographic distribution, private vs. public status, and AHC status
- 2. Prerequisite Coursework and Academics:** Pre-professional program phase information, minimum required GPAs for entry into program, reason(s) for requiring a minimum GPA, types of courses and number of credit hours or minimum grades required for entry into the program
- 3. Health Care Experience:** Requirement status for health care experience, types of and restrictions on required health care experience hours
- 4. Applications and Admissions:** Information about on-site interviews, writing samples, minimum required test scores, personal statements, references, and program deposits, as well as number of applications received, acceptance letters sent, and matriculants
- 5. Overall Program Questions:** Information about formulas for converting clock hours to credit hours for lecture and laboratory instruction, number of academic credits required for completion of program, modes of instruction, mission statement, and special tracks

## Survey Administration and Enhancements

The form, content, and timing of the PAEA Curriculum Survey have shifted throughout the last three decades. From 1983–1984 to 1990–1991, the survey was administered annually as part of the Annual Program Survey, and then its administration was pared down to once every three or four years. The last [Curriculum Survey Report was issued in 2010](#). Acknowledging the survey burden imposed by requiring program directors to complete two relatively long surveys each year, in 2014, the PAEA Research Council and Research team decided to split the Curriculum Survey into three parts, corresponding to the major phases of PA school curriculum: the prerequisites/admissions phase, the didactic phase, and the clinical phase. Moving forward, the administration of these three surveys will be rotated every summer. Thus far, the Prerequisite Survey was administered in 2015, the Didactic Curriculum Survey administered in 2016, and the Clinical Curriculum Survey administered in 2017. A report on each of the survey results will be released the year following administration.

The 2015 Prerequisite Survey was sent to 194 member PA program directors in June 2015. PAEA Research staff sent email reminders to non-respondents via Qualtrics™ survey software and conducted follow-up calls between July and September 2015. Research staff conducted follow-up calls until 193 member PA programs had completed the survey. The survey closed in September 2015. The survey yielded an overall response rate of 99.5% based on the 193 respondents; however, the response rate is lower for some items.

---

## Data Cleaning and Analysis

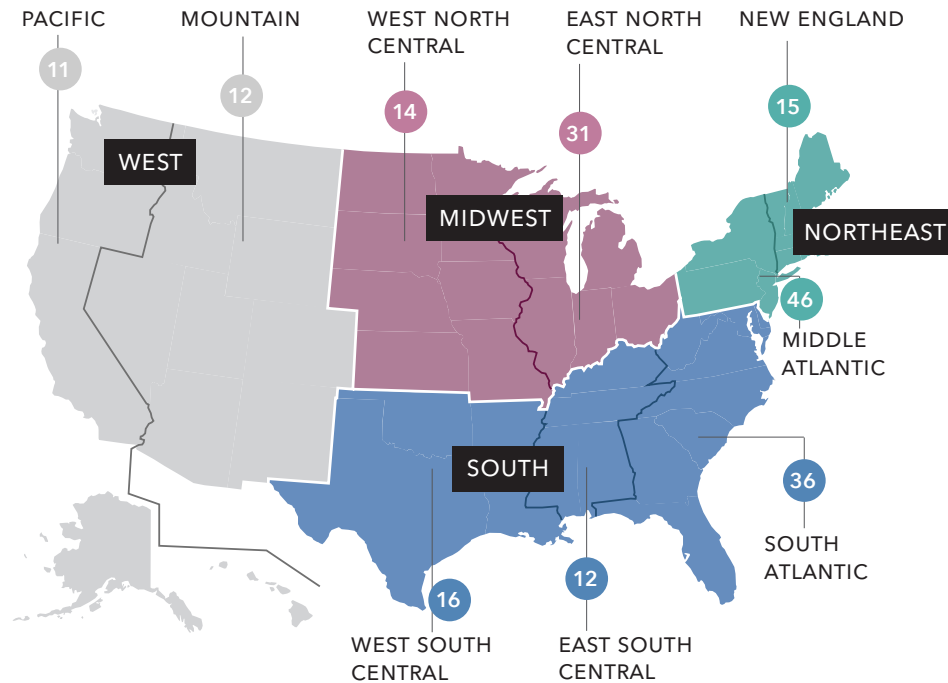

Responses to multiple-choice questions were checked for logical consistency and examined for extreme values and possible errors. In cases of obvious misinterpretations or inconsistencies in the responses to specific items, respondents were contacted for clarification. Responses that fell outside

of reasonable parameters were not included in the analyses. The number of responses to individual survey items varied slightly. The tables and figures presented in this report display aggregate data from the respondents. All data are reported for PAEA member programs only.

In general, analyses of the data consisted of producing descriptive statistics on the variables of interest — percentages, arithmetic mean (*M*), median (*Mdn*), standard deviation (*SD*), range, and percentiles. For some tables and figures, percentages will not equal 100% due to rounding or when multiple responses were allowed. Total columns in tables and figures may be designated by *n* (P) for the number of programs reporting. All GPAs are reported on a 4.0 scale.

**Table 2** Four programs with pre-professional phases only accept professional PA students from their pre-professional pool of students (i.e., all students are admitted as undergraduates into the pre-professional phase). All four PA programs that only accepted students into the pre-professional track cited a curriculum connection with the professional phase of the program as a reason for only accepting students in the pre-professional phase. The four programs also reported that, on average, 70.3% of students admitted to the pre-professional phase advanced to the professional phase of the program.
